## DustLoc

**Dust Suppressant**

**Road Stabiliser**

**Moisture  
Absorbent**

**Binding Agent**

**DustLoc** combines biodegradable, environmentally friendly organic and polymer binders and complex wetting agents that are designed to both dampen and stabilise the surface particles of your roads.

Made from sustainable materials **DustLoc** is an easy to use water soluble concentrate that is added to your water cart as part of your regular road maintenance.

**DustLoc's** unique formula works in 3 ways:

**Water Penetration** - **DustLoc** helps break the surface tension of the road allowing water to penetrate deeper.

**DustLoc Absorbs moisture** from the atmosphere making roads damper for longer and extending the watering cycle.

**Binding Agent** - **DustLoc** physically binds particles together, stabilising the road surface and reducing dust.
