

## WetDown

### *Dust Suppressant*

WetDown combines environmentally friendly organic and polymer binders, natural brines and wetting agents

### *Road Stabiliser*

that are designed to both dampen and stabilise the road surface.

### *Moisture Absorbent*

Made from sustainable materials WetDown is an easy to use water soluble concentrate that is added to your water cart as part of your regular road maintenance.

### *Binding Agent*

**WetDown's** unique formula works in 3 ways:

**Water Penetration** - **WetDown** helps break the surface tension of the road allowing water to penetrate deeper.

**WetDown Absorbs moisture** from the atmosphere making roads damper for longer and extending the watering cycle.

**Binding Agent** - **WetDown** physically binds particles together, stabilising the track surface and reducing dust.
